You Want Prompt Delivery

So Help Us Give It by Following these Directions in Ordering

ORDER EARLY. It will be greatly to your advantage to send us your orders as soon as you have had the time to make your selection. This assures you prompt shipments from our complete stocks and avoids any possible delays incident to the "Rush Season."

IN ORDERING follow catalog prices. They include prepayment of postage on all seeds ordered by packet, ounce, quarter-pound, pound and five-pound lots, unless otherwise specifically stated. If the order is to be sent by express or freight, deduct five cents per pound from prices given. Larger quantities than five pounds will be sent by express or freight, the customer paying such charges. To figure the cost of postage on flowering plants and trees, add 15 per cent to the list price.

THE POSTAGE TO FOREIGN COUNTRIES must be added to the cost of the goods selected in this catalogue, or the order will be reduced to allow for the postage. These rules will also apply to orders from the United States where no postage allowance is made for mailing, or we will send by express.

OUR TERMS. Cash with order. Remittances can be made in the following manner: By Post Office Money Orders, Express Money Orders, Checks, or Drafts on New Orleans or New York. Where it is not possible to secure these, Currency or U. S. Postage Stamps in good order will be accepted. If you send a check on a Country Bank, add 10c EXTRA FOR EXCHANGE. O. address if by mail; if by express, give your express office or nearest express office, to avoid any delay, if by rail or boat, give station or landing, and if possible the name of the railroad or name of boat. Where no instructions are given as to how shipments should be made, we will use our own discretion; but we urge all customers to state plainly whether they want goods mailed, expressed or shipped by boat or by rail. As all shipments by boat must be prepaid, customers not known to us must remit enough to cover freight.

NON-WARRANTY. The Steckler Seed Co., Inc., gives no warranty, express or implied, as to description, quality, productiveness, or any other matter of any seeds (bulbs, or plants), it sells and will not be responsible for the crop.

We have discontinued the 5 cent packages altogether on flower and vegetable seeds, because the quantity in a 5 cent package does not give enough seed to be of any benefit. Prices on packet seeds, except where noted, will be 10 cents per packet; 3 packets, 25c; 14 for $1.00, postpaid.

Selected Varieties

Planting time, March and April. One bushel is required to plant one acre. Thoroughly break and prepare the ground early. Rows should be 3½ to 4 feet apart and hills 12 to 14 inches apart in the row. When the cotton comes up it should be off-barred deep while it is small in order to let the heat of the sun strike the beds. As the plants get larger, shallow down and towards the last, cultivate very shallow. Always keep the top crust of the ground broken in dry weather, as it prevents it from losing its form. Never stop plowing for wet weather until the ground turns in slices; then quit immediately until it dries off. Never lay-by until the middle of August. The first week in April has been found to be the best time for planting cotton.

Carpet Grass is also used extensively for meadows and pastures in the South. **lb. 50c; 5 lbs. $2.25, postpaid.**

LESPEDEZA or JAPAN CLOVER. One of the best clovers that can be planted in the South. Planted at the rate of one bushel to the acre from December to May. STRAWBERRY SHOOKS OR DIRT BANDS

STRAWBERRY SHOOKS OR DIRT BANDS. Eggplants, Muskmelons and Early Cucumbers pay well if they come early into the market. These are placed in a frame and filled up with good rich soil, and five or six seeds in each box; when the plants come up, thin them out to one or two in each box. Steckler's Flower Seeds

Put up in 10c Packages—3 for 25c; 14 for $1.00, postpaid, except where noted.

Flower seeds require a little more care in sowing than the vegetable seed. The ground should be well pulverized and light enough not to bake after a rain. Some of the more delicate and finer varieties are better sown in boxes or seed pans, where they can be handled and protected from hard rains or cold weather, the other kinds do not transplant well, and are better sown at once where they are to remain.

All flower seeds in packages are mailed free of postage to the purchaser. Where there is more than one color, we generally import them mixed, as we find that most of our customers do not wish to purchase six packages or more of one variety to get all colors. One package of Asters, Zinnia, Phlox, Chinese Pink, Stocks, Petunia, Portulaca and others will always contain an equal mixture of the best colors.

Pecans

A Real Money Crop

The Pecan has become a very important nut, particularly in the Southern States and it may be said that there is no other fruit or nut tree which fits so well into the general farming of this region as the Pecan. Cotton, Corn, Cow Peas and other farm crops can be sown to advantage among the trees when they are young and even until the trees have begun to bear well. The region in which the Pecans may be grown with a proper selection of varieties, extends from Virginia to Florida, thence west to Texas and Oklahoma. As shade trees, they make handsome specimens and they are well adapted for street, road and yard planting.

LAWN AND GARDEN FERTILIZERS

Steckler's Fertilizers

We do not give description as everyone knows them.

PLANT FOODS

Plants require light, heat, air, water, fertile soil and cultivation. Plant food is composed of decayed vegetable matter and various natural salts and minerals found in the ground. Practically all soils contain limited amounts of potash, phosphoric acid and nitrogen in available form. Each crop as it grows takes more or less of the available plant food from the soil and continuous planting impoverishes all soils, there fore it is necessary to add fertilizer in some form to replenish the soil.

HUMUS is organic matter composed of leaves, plants, and decayed vegetation. Peet and leaf mould are examples. Humus is not essential to plant life as plants do not feed upon it, but after it breaks down into its component parts, potash, phosphoric acid and nitrogen are released.

LIME is not a fertilizer but helps to improve heavy soils, to break down organic matter and correct the acidity of sour soils.

POTASH is necessary for developing the fruit or flower bud. It also helps to fill out the fleshy portions of fruits and is necessary for the formation of sugar and starch. It enriches the flavors of fruits and brings out the color of flowers.

PHOSPHORIC ACID helps the plant to assimilate and to use the other necessary ingredients in the soil. It hastens maturity and is very essential to seed formation and fertility.

NITROGEN promotes the growth of leaf and stalk and produces color. Soils having excessive nitrogen require the addition of potash and phosphoric acid.

Wormoids

WORMOIDS

For Worms in Poultry. Most flocks are infected with worms. These parasites sap the health and vitality of the fowl, interfere with laying, stunt development and cost the poultry raiser thousands of dollars every year. Symptoms are drooping plumage, general weakness, loss of flesh or "going light," oftentimes paralysis and death. **Wormoids** is an individual treatment that is prompt, sure and safe. It comes in capsule form and is easily administered to every bird, usually at the same time the flock is culled, banded or treated for lice. Costs no more than flock treatments and is of course more sure and satisfactory. Come in following sizes:
